

PURE POWER IN AUTOMATION

Verified Documents, Validated Data.

Our IDEA goes beyond the boundaries of traditional OCR. It puts purified data at the center of digital mortgage, using OCR as a launch point for machine learning and rules-based technology to transform what's possible in data and document processing.

Optical Character Recognition (OCR)
Turn images into text

Begin a digital journey to understand your data

Automated Document Recognition (ADR)
Machine-trained algorithms recognize document patterns to cluster and classify

Greatly expand the number of documents that can be classified through automation

Automated Data Extraction (ADE)
Special programs perform textual analysis on structure and unstructured documents

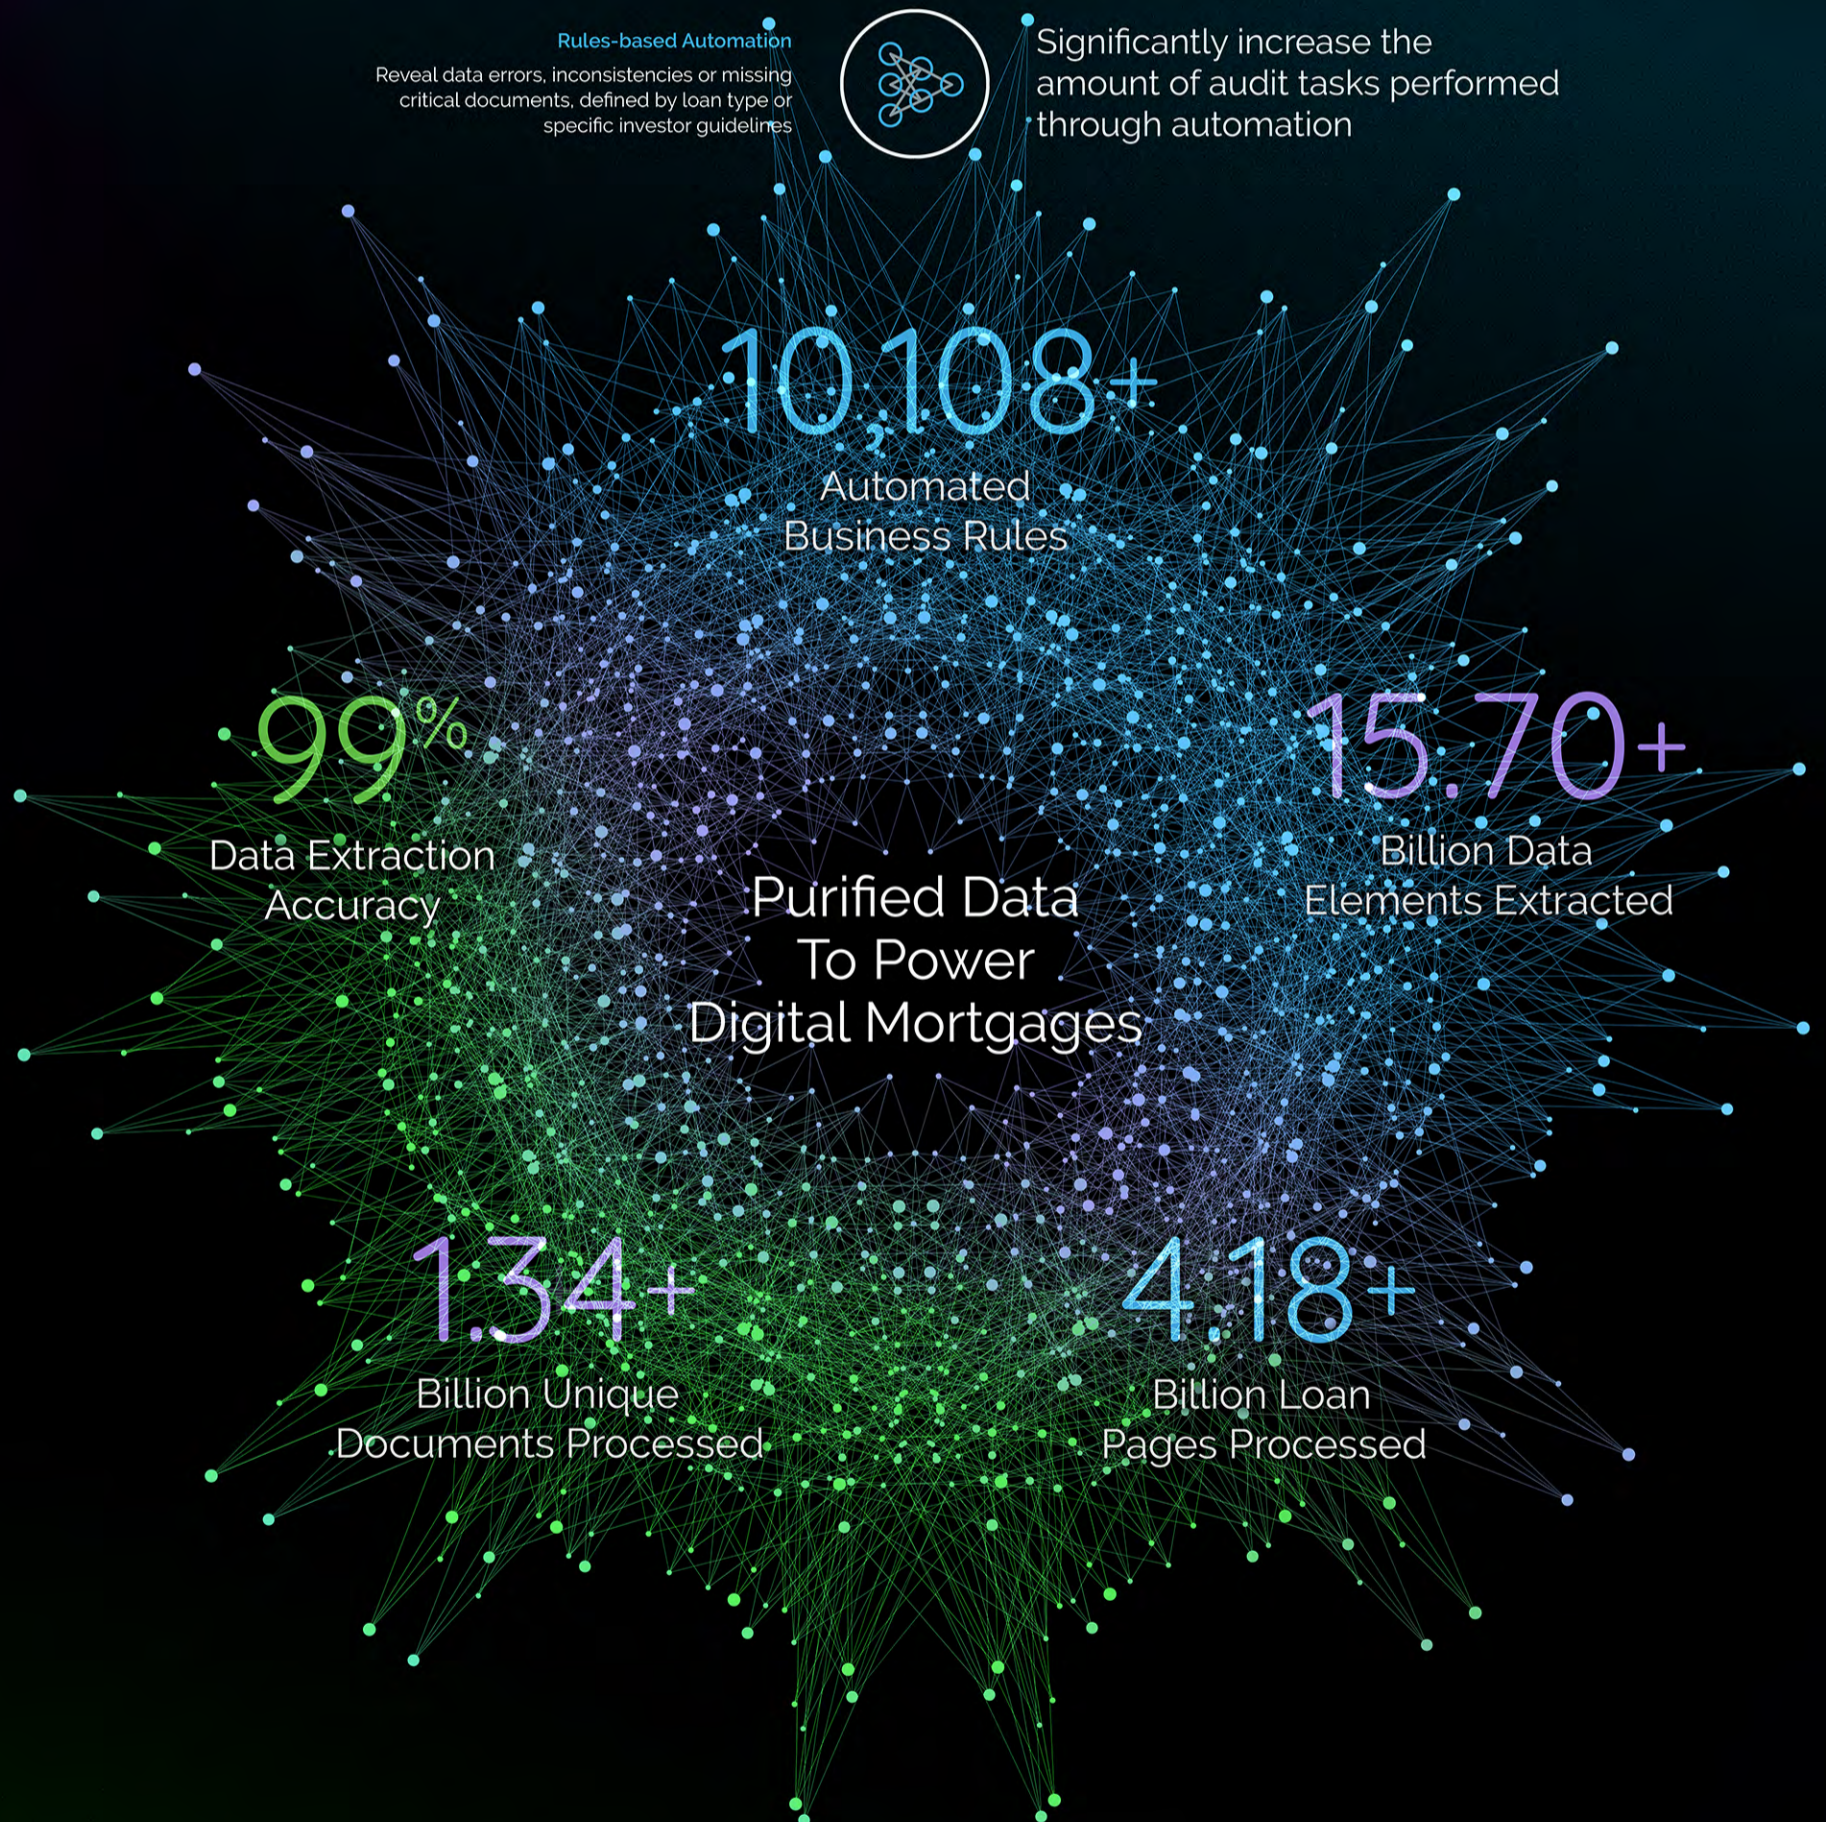

Pinpoint a single data element or hundreds to power reviews

Rules-based Automation
Reveal data errors, inconsistencies or missing critical documents, defined by loan type or specific investor guidelines

Significantly increase the amount of audit tasks performed through automation

LoanLogics IDEA®

(Intelligent Data Extraction & Automation)

We're already helping lenders, investors and servicers power their reviews more efficiently and effectively through automation. Imagine the idea of purified data powering more sophisticated credit models, underwriting automation, other AI applications and ultimately, an improved borrower experience.
